

IRIS

Adjusting dampers

Product	IRIS
Construction material	Steel

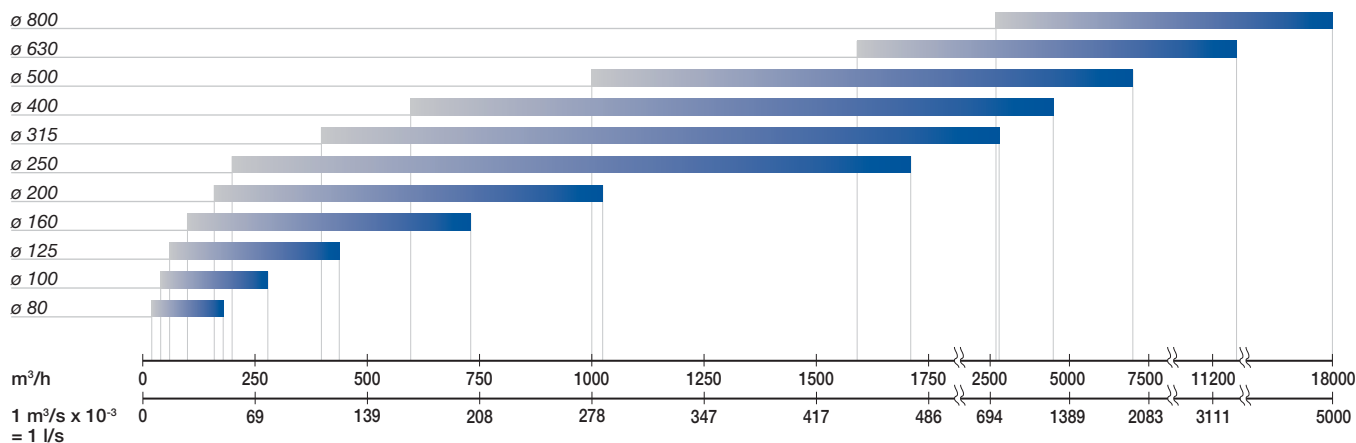

IRIS dampers are used to control and adjust the air flow in circular ducts both in supply and exhaust systems.

Thanks to the pressure outlet, the graduated scale on the command lever and the table applied on the damper casing, by simply using a manometer you can precisely measure (+/- 5% error margin) the value of the air that passes through the damper in cu. m./h and if necessary set a new value.

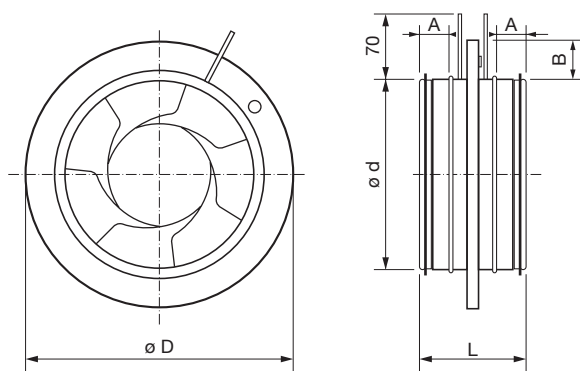

Construction Galvanized steel sheet casing and blade.
On request version in stainless steel (IRIS-S)
